1. Installation

1.1 Identify your living connect® thermostat

living connect® comes in several versions to meet the demands of different markets. You identify your version by the code number on the box label. Adapters for a range of different valves types are available as accessories, see chapter 1.3.

<table>
<thead>
<tr>
<th>Code no.</th>
<th>Version characteristics</th>
<th>Quick guide languages</th>
</tr>
</thead>
<tbody>
<tr>
<td>014G0001</td>
<td>Incl. pre-mounted RA adapter</td>
<td>UK, DE, DK, NL, FR, PL, SE, FI</td>
</tr>
<tr>
<td>014G0002</td>
<td>Incl. RA + M30 x 1.5 adapters</td>
<td>UK, DE, DK, NL, FR, PL, SE, FI</td>
</tr>
<tr>
<td>014G0003</td>
<td>Incl. RA + M30 x 1.5 adapters</td>
<td>UK, CZ, SK, RU, TR, HU, HR, SI</td>
</tr>
</tbody>
</table>

1.2 In the package

living connect® 014G0001 is supplied with a pre-mounted adapter for Danfoss RA valves, two alkaline AA batteries, a 2 mm Allen key and a Quick Guide in languages English, German, Danish, Dutch, French, Polish, Swedish and Finnish.

living connect® 014G0002 and 014G0003 are supplied with adapters for Danfoss RA valves and valves with M30 x 1.5 (K) connections, two alkaline AA batteries, a 2 mm Allen key and a Quick Guide in English, German, Danish, Dutch, French, Polish, Swedish and Finnish (014G0002) or in English, Czech, Slovak, Russian, Turkish, Hungarian, Croatian and Slovenian (014G0003).
### 1.3 Overview of valve adapters

Adapters for a wide range of different valve types are available as accessories.

1.4 Installing the right adapter

**Adapter for RA valves** (pre-mounted on 014G0001)

1. Place the RA adapter on the valve as shown.
2. Tighten the adapter with the 2 mm Allen key.

**Adapter for M30 x 1.5 (K) valves**

1. Place the K adapter on the valve as shown.
2. Hand-tighten the K adapter (max. 5 Nm).

**Adapter for RAV valves** (accessory)

1. Click the inner adapter on the valve.
2. Hand-tighten the outer adapter (max. 5 Nm).

**Adapter for RAVL valves** (accessory)

1. Click the inner adapter on the valve.
2. Hand-tighten the outer adapter (max. 5 Nm).
Adapter for RTD valves (accessory)

1. Place the RTD adapter on the valve as shown.
2. Hand-tighten the RTD adapter (max. 5 Nm).

Adapters for M28 valves (accessories)
Please follow the instructions supplied with the valve adapter for the specific M28 valve.

1.5 Inserting the batteries
Remove the battery cover and insert two AA batteries. Make sure the batteries are correctly oriented.
Rechargeable batteries must not be used.
When replacing batteries the programme settings will be preserved, but after two minutes the settings for time and date are reset.

The low battery symbol 🕒 is displayed approx. one month before the batteries run out.
After approx. two weeks the 🕒 symbol will flash 14 times from 19:00 to 21:00 hrs.
Before the batteries run out living connect® will leave the valve in a slightly open position to protect the valve from damage.

1.6 Using the buttons
living connect® has two arrow buttons ⬆️⬇️ which allow you to navigate the display and the menus and to set the temperature*.

The dot button ⬇️ is used to select and confirm.

If the display is off, press either button to activate the display.

*The temperature is usually controlled via Danfoss Link™ CC, but may be changed at any time using the thermostat’s buttons. If this is done, the thermostat sends a message to Danfoss Link™ CC, instructing it to synchronise the other thermostats in the same room.
1.7 Installing living connect®

1. living connect® must be in Installation Mode to be fixed correctly onto the valve. This is indicated by a large, flashing M in the display. Installation Mode can be selected by pressing for 3 seconds until M is displayed, then release and press again.

2. Screw living connect® onto the adapter and tighten by hand (max. 5 Nm). While slightly pressing forward, turn living connect® clockwise until it locks, then tighten.

3. Press to fix living connect®.

4. Icons for Network Connection and Alarm are flashing, indicating living connect® is ready for connection with Danfoss Link™ CC.

1.8 Automatic adjustments

During the first night of operation living connect® will shut off the radiator heat and then open again to detect the exact opening point of the valve. This will allow living connect® to control the heat as efficiently as possible. If necessary, the procedure is repeated once a night for up to a week. You might experience the valve being warm during the adjustment procedure, regardless of the room temperature.

Intelligent Control (Forecast)
During the first week of operation living connect® learns when it is necessary to start heating the room in order to reach the correct temperature at the correct time. The intelligent control will continuously adjust the heating time compared to seasonal temperature changes.

Using Saving Program requires that your heating system has enough heat for a short period during heat up. If your experience problems you should contact your installer.
1.9 Removing *living connect*®

1. Activate Installation Mode: Press \( \text{configured symbol} \) for 3 seconds to select the Function Menu. Select \( M \) with \( \text{configured symbol} \). When \( M \) flashes, press \( \text{configured symbol} \).

2. A large \( M \) is flashing in the display to indicate that Installation Mode is activated.

3. Remove the battery cover and the batteries.

4. Insert the Allen key or similar into the hole to lock the adapter ring. Turn counterclockwise to unscrew *living connect*® from the adapter.

1.10 Resetting *living connect*® to default settings

1. Remove the battery cover and take out one battery.

2. Press and hold \( \text{configured symbol} \) for approx. 5 seconds, while reinserting the battery.
1.11 Removing an adapter from *living connect®*

1. Remove the battery cover.

2. Insert a small hex key or similar into the locking hole to lock the adapter ring.

3. With the hex key locking the adapter ring, turn the adapter in the shown direction.

4. Put back the battery cover. Mount *living connect®* on another valve adapter according to the instructions supplied with the adapter.

*Tested for safety and EMC requirements as specified in EN 60730-1, EN 60730-2-9 and EN 60730-2-14.*
3. Overview of display and control buttons

Low battery symbol
Temperature set point*
Network connection
Alarm
Lock
Frost protection

Use these buttons to navigate within the menu and to adjust the temperature.
Use this button to select the menu and confirm choices.

* living connect is displaying the set temperature, not the measured room temperature.

4. Connecting living connect® to a Danfoss Link™ system

4.1 Configuring rooms in Danfoss Link™ CC
Make sure that the room in which living connect® has been installed, has been configured in Danfoss Link™ CC - see installation guide for Danfoss Link™ CC.

4.2 Connecting living connect® to Danfoss Link™ CC

1. Move the Danfoss Link™ CC within a distance of 1.5 m from the thermostat (the battery pack 014G0262 is recommended).

2. The “Configure room” menu is displayed. Select “Room devices”.

Configure Room
Bedroom, North
Adjust the room’s settings here.
Devices in room: 0
Regulation type: Unregulated.

Room name
Room devices
Heating regulation
3. **Room Devices**

**Bedroom, North**

The room contains:

![Image]

The configuration is invalid:

Room has no devices at all.

- **Add a device**
- **Remove a device**

Select “Add a device”.

4. **Add Room Devices**

1. Keep the device within 1 meter of the controller and get ready to begin installation. Press here when ready:

   ![Image]

   **Begin registration**

2. Press the installation button on the device now:

   ![Image]

Press “Begin Registration,” and then press and release \( \times \) on the thermostat.

5. **Room Devices**

![Image]

Device was added: FTS-117

Add another?

- **Yes**
- **No**

Choose “Yes” to add another device to the room, choose “No” to continue.

6. **Heating System Mode**

Choose Heating System and press \( \times \).

- **Moderate response**
  - Heating with low return temperature (recommended for district heating).
- **Quick response**
  - Fast heating with warm radiators (recommended for boilers).

7. **Radiator Configuration**

Here you can configure how the radiators are placed:

- **Visible Radiators**
  - Used when radiators are visible.
- **Covered Radiators**
  - Used when radiators are covered.

Choose Radiator Type and press \( \times \) (only with Danfoss Link™ RS room sensor).

8. Once a device has been registered and the Danfoss Link™ CC is placed in final position, you must perform a network test - see installation guide for Danfoss Link™ CC
4.3 Testing the connection

1. M
   Press ▲ for at least 3 seconds until M is displayed.

2. L1
   Press ▼ until L1 is displayed. Press ▲ to make the connection. L1 disappears when the connection is made.

3. °C
   If no connection can be made, the alarm and antenna symbols will both be flashing. Refer to “Technical questions” at www.living.danfoss.eu

5. Additional settings

5.1 Adjusting to radiator/room conditions

Press ▲ for at least 3 seconds until M is displayed.
Press ▼ until Pb is displayed, then press ▲.

The default setting is Pb.
Use P1 if the radiator appears oversized for the room.
Use P3 if it is undersized.*

Select P1, P2 or P3 using ▼ and exit using ▲.

* The frequency of P1, P2 and P3 regulation varies to compensate for radiator over/under sizing.
5.2 Open-window function

living connect® features an Open-window function, which closes the valve if the room temperature is falling dramatically, thus reducing the heat loss. The heat is turned off in the entire room for up to 30 minutes, before living connect® returns to its original settings. When Open-window has been activated, the function is quarantined for 45 minutes.

Note! Be aware that the Open-window function will be affected, if curtains or furniture is covering living connect®, thus preventing it from detecting the decreasing temperature.

5.3 Automatic valve exercising

To keep the radiator valve functional and at its best, living connect® automatically exercises the valve every Thursday at approx. 11:00 hrs by opening it fully and then return to normal setting.

6. Safety precautions

The thermostat is not intended for children and must not be used as a toy. Do not leave packaging materials where children may be tempted to play with them, as this is extremely dangerous. Do not attempt to dismantle the thermostat as it contains no user-serviceable parts. If error code E1, E2 etc. is shown in the display or other defects appear, please return the thermostat to the distributor.

7. Disposal

The thermostat must be disposed of as electronic waste.
Installer
